A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 13, 2011 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 12, 14, 15, 17, 21, 22, 26 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over De La Torre et al (Revista Italiana di Nutrizione Parenterale ed Enterale, Vol. 21, No. 3, pp. 105-111, Wichig Editore, Mila IT, January 1, 2003) in view of Bijlsma et al (WO 00/57727).

De La Torre et al disclose the use of partially hydrolyzed guar gum (PHGG) in the treatment of inflammatory bowel disease (IBD). It is noted that De La Torre do not specifically disclose average, viscosity and the dosage set forth in the claims. However, note that Bijlsma et al disclose that administration of high viscosity polysaccharides may prevent the absorption of nutritional components and disclose the administration of polysaccharides having less than 10 mPa.s (page 4, lines 24-33). Bijlsma et al further disclose the administration of complete food to person suffering from inflammatory bowel disease containing protein based on casein (page 8, Example 6). It would have been within an ordinary skill in the art at the time of the claimed invention to optimize the molecular weight and the amount of PHGG for the treatment of IBD as disclosed by De La Torre et al and to administer the same in combination with protein as disclosed by Bijlsma et al because such a person would have had a reasonable expectation that the resulting composition would be useful for the treatment of IBD.

Applicant's arguments filed May 13, 2011 have been fully considered but they are not persuasive.

Applicant contends that the molecular weight and viscosity of partially hydrolyzed guar gum (PHGG) are not taught by De La Torre et al. This argument has not been found persuasive since based on the teaching by De La Torre et al, it would have been within the ordinary skill in the art at the time of the claimed invention to optimize the average molecular weight and viscosity of PHGG disclosed by De La Torre et al and to use said PHGG for the treatment of IBD.
